Specification

The examiner has not checked the specification to the extent necessary to determine the presence of **all** possible minor errors (grammatical, typographical and idiomatic). Cooperation of the applicant(s) is requested in correcting any errors of which applicant(s) may become aware of in the specification, in the claims and in any future amendment(s) that applicant(s) may file.

Applicant(s) is also requested to complete the status of any copending applications referred to in the specification by their Attorney Docket Number or Application Serial Number, **if any**.

Please note that the status of the parent application(s) and/or any other application(s) cross-referenced to this application, should be updated in a timely manner.

Amendments to the Claims

Applicants are required to clarify/insure the next listing of claims provided correctly indicates that claims 1-11 have been cancelled. The currently provided listing recites claims "1 to 1", which has been treated as reciting "1 to 11" by the examiner for the purposes of this office action.

Election/Restriction

No obviousness-type double patenting rejections have been made in this application due to the restriction requirement in SN 09/979,920.

Claim Objections

Art Unit: 1755

Claims 13, 17, 22-28, 30 and 32 are objected to. In claim 13, step "d" and claim 17, line 1, "catalysts" should be changed to "catalyst" to correct the problem.

Claim Rejections - 35 USC § 112

Claim 19 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 19 lacks literal antecedent basis earlier in the claim for the recitation of "the activated catalysts". In line 2, "catalysts" should be changed to "catalyst".

Allowable Subject Matter

Claims 12, 14-16, 20, 21, 29, 31, 33 and 34 are allowable over the prior art of record. The remaining claims would be allowable if amended to overcome the hereinabove rejections and objections.

The prior art fails to teach or suggest the specifically claimed carbon content of the catalyst precursor. The prior art also fails to teach or suggest the specifically claimed process for making this composition, namely the prior art reacts the source of vanadium and the source of phosphorus at the same time with the alcohol/polyol mixture. It would appear that the specifically claimed process, using the claimed ratio of components, results in this carbon content. The specification also teaches that the particular calcination leaves a different residual carbon content, which results in the best performance.

Art Unit: 1755

Applicants are advised that any evidence to be provided under 37 CFR 1.131 or 1.132 and any amendments to the claims and specification should be submitted prior to final rejection to be considered timely. It is anticipated that the next office action will be a final rejection.
